Pre-Saturated Cleanroom Wipes

- Reduce the use of squirt bottles and dipping cans
- Reduce the amount of isopropyl alcohol used
- Use the exact percentage of IPA each application
- More even distribution of alcohol on the wipe and hence the wiping process
- Fewer VOCs (Volatile Organic Compounds)
- Safer to use, ship, and store than flammable liquids
- Convenience: No pouring, spraying, filtering, or diluting

A 70% concentration of ethanol or isopropyl alcohol has been demonstrated to be the most effective. Water acts as a catalyst and plays a key role in denaturing the proteins of vegetative cell membranes. The water content slows evaporation, therefore increasing surface contact time and enhancing effectiveness.

Get a grip on hand protection

Disposable Gloves

Disposable gloves afford your worker dexterity in applications requiring chemical protection.

Nitrile – Versatile synthetic copolymer is used to make the gloves. Ideal for stripping and degreasing, chemical washing and is resistant to animal fats and vegetable oils. Nitrile does not contain latex that may cause skin allergies. Available in low to high modulus varieties.

Latex – Natural rubber latex is a milky sap-like substance produced by the rubber tree. These trees are found in Southeast Asia, India and South America. When the trunks of the trees are tapped, they produce latex. This latex is then collected and used in manufacturing. Provides excellent hand protection with an excellent grip. Does not hold up well in organic solvents, oils, greases or fuels such as kerosene or gasoline.

Vinyl – A synthetic thermoplastic polymer which gives excellent resistance to some acids, fats and petroleum hydrocarbons. Excellent for food service applications.

Synthetic Vinyl (Vinyl/Nitrile Blend) – An advanced Synthetic Elastomer and Polyvinyl Chloride blend provides excellent resistance to some acids, fats and petroleum hydrocarbons. Excellent for food service, general purpose and industrial applications.

Glove Terms

Absorbable Dusting Powder - A glove powder used to ease the donning of gloves. Donning powder on gloves is composed of cornstarch (USP absorbable dusting powder).

Powder - Due to the natural sticky characteristic of latex, powder is used as the means to prevent the gloves from sticking together and also for the ease of donning. Powder gloves are easy to put on hands in a wet environment as compared to powder free gloves. Disadvantage: It leaves powder residue on hands and some users may be allergic to powder in general.

Powder Free - Gloves are made powder free through the chlorination or polymer coating processes. The latex protein content is substantially removed from the glove when these processes are used to remove powder.

Examination Grade Gloves - The FDA requires manufacturers of all examination (medical grade) gloves to have a 510(k) device listing on file with the agency. This means that the manufacturer has been tested and approved to manufacture gloves for medical use (typically involves ISO certification, as well). This does not mean that the each glove is officially approved or certified for medical use. The FDA conducts random testing on containers of examination gloves as they enter the U.S. to ensure the manufacturer of the gloves maintains the quality requirement.

- Examination Gloves have to meet certain criteria of performance that is set by an ASTM standard. For example, Latex Examination Gloves have to meet ASTM D3578
- The gloves shall comply with the dimension requirements prescribed in the standard
- Physical Properties mentioned in the standard as below;
 - Tensile Strength, 11 MPa, min
 - Ultimate Elongation, 300% , min
- The gloves also need to be tested for Freedom from Holes based on ASTM D5151 to be used as patient examination grade gloves and tested as per below sampling plan and quality level

Characteristic	Related Defects	Inspection Level	Acceptable Quality Level (AQL)
Freedom From Holes	Holes	I	2.5
Dimensions	Width, Length and Thickness	S-2	4
Physical Properties	Before Aging, After Accelerated Aging	S-2	4

Non-Sterile - Examination and non-medical gloves are normally non-sterile. This means that the gloves are not subjected to gamma irradiation that kills micro-organisms.

Not for Medical Use/Industrial Grade/Disposable/General Purpose Gloves - Disposable Gloves are generally used in the following applications: Food handling, salons/spas, electronic assemblies, laboratorial work, and packing process, automotive, janitorial, general pharmaceutical and home use. These gloves are not recommended for medical use or patient examination, especially to prevent transmission of organisms, blood-borne pathogens and protection against various chemicals.

Elongation - Measurement of the length a glove can be stretched before it breaks. It is expressed as a percent of the original length of the glove right at the moment it breaks. The higher the percentage, the more stretchable the glove material.

Chlorination - Used to reduce the tackiness of gloves to improve the ease of donning. Double Chlorination is when both sides of a disposable glove are treated. Extra washing during the chlorination process reduces the level of proteins making the glove less likely to cause a latex reaction to the wearer.

Federal Food, Drug, and Cosmetic Act (FFDCA)/21CFR - The FDA is responsible for regulating food additive use. In addition to direct food additives, their regulations also cover substances that may become indirect food additives when food comes into contact with them. In this sense, gloves are indirect food additives, and the FDA regulations include provisions specifying which substances are acceptable components. These can be found in Title 21 of the Code of Federal Regulations, Part 174-178. It is in compliance with these regulations that is critical to glove manufacturers, and should be of greatest interest to end-users. The materials latex; nitrile butadiene rubber; Poly Vinyl Chloride and Polyethylene that are used to make disposable gloves are safe to be used as an indirect additive to come in contact with food.

Glove Thickness (Measured in mil. 1 mil = .025 mm) - A glove's thickness varies from one area to another. The thickest part of a glove will be in the fingertip. The middle of the glove (palm) is going to be the average thickness of the glove, while the cuff is going to be the thinnest part of the glove.

That perception that the thicker the glove the better the glove, is not always true. Thicker gloves may support longer exposure to chemicals than thinner gloves, but for other applications where tensile strength, elasticity and dexterity are required, thinner gloves may be the preferred choice. With the advancement of the manufacturing process, a 3 mil glove for example now can have the same tensile strength as a 5 mil glove.

Leaching - The washing and cleansing process of gloves with water in the manufacturing of gloves, by which excess chemicals and/or latex protein are dissolved and washed away from the gloves.

Modulus - A low modulus glove is easy to stretch and flex, whereby a high modulus glove is hard to move and stretch.

Permeation - Movement of substance through a thin film, such as a glove, on a molecular level.

Tensile Strength - Measurement of the amount of force or pull required to break a glove. Tensile strength is expressed in Mpa, and the higher the number, the stronger the glove material.

Beaded Cuffs - Provides strength in donning and helps prevent tearing.

Ambidextrous - Reversible style can be worn on either hand for a longer lasting use.

Flocked Lining - Cotton fiber applied to the inside of unsupported gloves. Absorbs perspiration and allows for better comfort.

The right sorbent for every spill

Sorbent Types

Sorbents that have recycled content are marked with this symbol in the sorbent products section.

Standard universal sorbents absorb both oil and water based fluids. Typically gray in color. Best choice for most indoor spills.

Oil Only Sorbents absorb oil/ hydrocarbon based fluids and repel water. Typically white in color. Most effective when used outside.

Hazmat sorbents are also universal and absorb aggressive chemicals or unknown spills that can be both oil and water based. Yellow is a universal color for safety and caution and provides high visibility. The color coding will easily identify these sorbents in an emergency and warns that hazardous fluids may have been absorbed into the product. These sorbents can withstand chemicals and will keep compliancy with a growing number of local, state and federal regulations. For indoor and outdoor use. *Hazmat Sorbents available upon request.*

Sorbent Formats

Sorbent Pads are the fastest way to clean up a spill and the most popular format

Sorbent Rolls are designed primarily to cover large areas and walkways.

Socks are used to soak up or create a barrier to contain the spill.

Pillows are used to absorb leaks too large for a pad.

Booms are an ideal solution to contain and absorb large spills in water and on land.

Drum top pads absorb fluids that result from messy drips and spills from the drum dispensers.

Rugs and mats can be used on walkways that may often be wet, for safety purposes to provide good traction.

Emergency response spill kits help prepare any facility with everything needed for fast response to unexpected spills.

Truck spill kits are compact and can be easily stowed for convenient access when a spill occurs.

Sorbent Technologies

Meltblown

Made from 100% polypropylene. Most commonly used sorbent technology. Available in oil only and universal.

Sorbent Construction

Fine Fiber Increases absorbency rate, wicking, capacity, and fluid retention.

Lamination adds strength and reduces linting.

Sonic Bonded will enhance sorbent durability.

Sorbent Weights

Weight is chosen based upon amount of fluid to be absorbed and required sorbent durability.

Light weight (150-199 gsm)

Great for small leaks and spills.

Medium weight (200-249 gsm)

Very absorbent but not as durable as heavy weight.

Heavy weight (250-299 gsm)

The industry standard with added durability and absorbency.

Extra heavy weight (300-440 gsm)

Premium and durable for heavy duty applications.

TaskBrand® Universal Sorbents

- Soak fluid spills that are water and oil based
- They are a good choice for most situations
- Available in a range of different weights and materials
- Perforations allow you to select a size based on the need

Prep, Paint and Finish Cloths

Essential Tack Cloth

- Step 1, Option A
- Low-linting fabric combined with optimum level of "tackifier"
- Stretch cloth to release more tack for longer use
- Effectively removes dirt and sanding dust
- Minimizes potential for tack transfer and residue
- Flexible fabric conforms to the surface and enables access to hard to reach corners
- Wax and silicone free
- Great alternative to traditional woven gauze material
- Laser sealed edges for non-fraying edges
