Brick Packs

Brick packs are compressed packages which allow for 50% space reduction when storing product compared to boxes.

The outer poly wrapper protects the wiping cloths during storage and can also be used as a dispensing system. It doesn't crush like boxes and is impervious to rain and damp storage conditions, leaving wiping cloths clean and dry. Brick pack options are noted with a BP in the Case Options*.

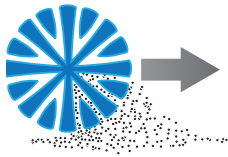

* If desired case weight option is not listed please contact your sales representative. All case weight options are available for all rag and towel items but may require an MOQ.

* Ask your salesperson about minimums for private label rags.

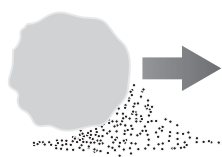

What is Microfiber?

Soft, ultra-absorbent polyester (80%) and polyimide (20%) fibers are split until they are thinner than silk. Microfiber pads average 200,000 microfilaments per square inch. One strand of MicroWorks® Microfiber is several hundred times smaller than a strand of cotton. The wedge-shaped, lint free, hypoallergenic microfibers lift and trap dust, grime, and moisture without harming/scratching delicate surfaces.

Greener - Uses 95% less water and chemicals than a traditional cleaning system. Durable pads launder for reuse. Reducing solid waste.

The right sorbent for every spill

Sorbent Types

Standard universal sorbents absorb both oil and water based fluids. Typically gray in color. Best choice for most indoor spills.

Sorbents that have recycled content are marked with this symbol in the sorbent products section.

Oil Only Sorbents absorb oil/hydrocarbon based fluids and repel water. Typically white in color. Most effective when used outside.

Sorbent Formats

Sorbent Pads are the fastest way to clean up a spill and the most popular format

Sorbent Rolls are designed primarily to cover large areas and walkways.

Socks are used to soak up or create a barrier to contain the spill.

Pillows are used to absorb leaks too large for a pad.

Booms are an ideal solution to contain and absorb large spills in water and on land.

Drum top pads absorb fluids that result from messy drips and spills from the drum dispensers.

Rugs and mats can be used on walkways that may often be wet, for safety purposes to provide good traction.

Emergency response spill kits help prepare any facility with everything needed for fast response to unexpected spills.

Truck spill kits are compact and can be easily stowed for convenient access when a spill occurs.

Sorbent Technologies

Meltblown

Made from 100% polypropylene. Most commonly used sorbent technology. Available in oil only and universal.

Air Matrix™

Oil only. Made from 100% premium recycled polypropylene primarily recycled plastic bottles and other recycled synthetics.

Ultraclean™

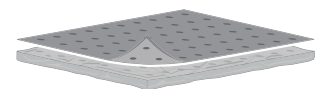

Universal only. Made from a blend of recycled synthetic fibers for balanced performance of water and oil equally.

Sorbent Construction

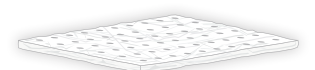

Fine Fiber Increases absorbency rate, wicking, capacity, and fluid retention.

Lamination adds strength and reduces linting.

Sonic Bonded will enhance sorbent durability.

Sorbent Weights

Weight is chosen based upon amount of fluid to be absorbed and required sorbent durability.

**Light weight
(150-199 gsm)**

Great for small leaks and spills.

**Medium weight
(200-249 gsm)**

Very absorbent but not as durable as heavy weight.

**Heavy weight
(250-299 gsm)**

The industry standard with added durability and absorbency.

**Extra heavy weight
(300-440 gsm)**

Premium and durable for heavy duty applications.
