- Reduce the use of squirt bottles and dipping cans
- Reduce the amount of isopropyl alcohol used
- Use the exact percentage of IPA each application
- More even distribution of alcohol on the wipe and hence the wiping process
- Fewer VOCs (Volatile Organic Compounds)
- Safer to use, ship, and store than flammable liquids
- Convenience: No pouring, spraying, filtering, or diluting

A 70% concentration of ethanol or isopropyl alcohol has been demonstrated to be the most effective. Water acts as a catalyst and plays a key role in denaturing the proteins of vegetative cell membranes. The water content slows evaporation, therefore increasing surface contact time and enhancing effectiveness.

# What is Microfiber?

Soft, ultra-absorbent polyester (80%) and polyimide (20%) fibers are split until they are thinner than silk. Microfiber pads average 200,000 microfilaments per square inch. One strand of MicroWorks® Microfiber is several hundred times smaller than a strand of cotton. The wedge-shaped, lint free, hypoallergenic microfibers lift and trap dust, grime, and moisture without harming/scratching delicate surfaces.

Cross sections: Image (A) is microfiber thread, image (B) is cotton thread; microfiber leaves little or no residue, unlike cotton

**Greener** - Uses 95% less water and chemicals than a traditional cleaning system. Durable pads launder for reuse. Reducing solid waste.

# The right sorbent for every spill

# **Sorbent Types**

Standard universal sorbents

absorb both oil and water based fluids. Typically gray in color. Best choice for most indoor spills.

Oil Only Sorbents absorb oil/ hydrocarbon based fluids and repell water. Typically white in color. Most effective when used outside.

Hazmat sorbents are also universal and absorb aggressive chemicals or unknown spills that can be both oil and water based. Yellow is a universal color for safety and caution and provides high visibility. The color coding will easily identify these sorbents in an emergency and warns that hazardous fluids may have been absorbed into the product. These sorbents can withstand chemicals and will keep compliancy with a growing number of local, state and federal regulations. For indoor and outdoor use. Hazmat Sorbents available upon request.

**Pillows** are used to absorb leaks too large for a pad.

Booms are an ideal solution to contain and absorb large spills in water and on land.

**Drum top pads** absorb fluids that result from messy drips and spills from the drum dispensers. **Rugs and mats** can be used on walkways that may often be wet, for safety purposes to provide good traction.

**Emergency** response spill kits help prepare any facility with everything needed for fast response to unexpected spills.

Truck spill kits are compact and can be easily stowed for convenient access when a spill occurs.

# Air care simplified

# The AirWorks® Complementary Air Care System

Solutions included in the complementary system are marked with this symbol in the odor control section.

No client should ever smell anything unpleasant anywhere in any facility. Cleanliness of the restroom is one of the most important factors in the overall patron perception of an establishment. A poorly maintained restroom can turn clientele away from an establishment permanently.

Every commercial enterprise should incorporate some form of ambient scenting as part of its marketing strategy to increase traffic and customer satisfaction. The AirWorks® Complementary Air Care System is created with products that have corresponding fragrances of varying intensities, creating a uniform scent throughout the space.

### AirWorks® SPLASH FREE™ Urinal Screen
